AutoGenSat© Model 5000 Model 5001 Model 5002 Mobile Command Center

Thank you for your interest in AutoGenSat© our newest fixed mobile high broadband solution. It is our desire to provide our customers with the solutions that will best meet their needs. Our AutoGenSat© product and services are available worldwide based upon iDirect's teleport operators.

Product Overview and Description:

AutoGenSat combines a (.96M or 1.2M VSAT) Internet Broadband Portable System, an Onan generator or equivalent all securely mounted and vented in an easy to move, fully enclosed, portable, rolling cargo trailer. The system is deployable in 4 minutes and offers complete WAN and wireless LAN connectivity. Applications include Internet access, corporate network connectivity, VoIP, emergency preparedness and Video streaming applications for special events along with many more.

The VSAT is mounted on top of a trailer, provides broadband Internet on demand of up to 18Mbps, sets up in 4 minutes and is fully automated in opening, closing and pointing the dish for satellite connectivity.

The wireless access point included is user dependent for desktops or laptop PCs. The wireless card communicates with the remote access point located in the AutoGenSat trailer at data rates of based on the system specified. Multiple cards can be used for a complete wireless broadband solution, including mesh networks networks..

External High gain wireless (Wi-Fi or Wi-Max) access point antenna provides power for local area wireless ranges of up to 3 to 5 miles line of site distances.

The internal 10/100 switch Hub allows for network expansion for other applications.

The internal 10/100 Router allows for network expansion for applications requiring IP (DHCP or Static) assignment.

The commercial mobile power system provides low noise and vibration 120/240 Volts A/C power for external power requirements and complete power for all on board electronics.

The gas tank allows AutoGenSat to perform without interruption for over 80 hours of service. A crossover switch is provided for external plug in power if the generator is not needed along with a solar power or battery inverter.

Our keypad security startup panel is designed for the novice user to start the generator and the VSAT dish automatically by entering a personal security code.

The 19" caster based equipment racks allow for equipment expansion inside the AutoGenSat trailer along with cables connected to the internal network.

For wired external connections AutoGenSat offers several an RJ45/RJ11 external ports in a weather proof receptacle box on the back of the trailer for phones and direct wired ethernet..
